creative brief

Evelyn Tham

Project Title: rhinoceros hornbill

Project Overview

- Goal of my website would be to educate people about the rhinoceros hornbill and bring awareness to their vulnerable status

Resources

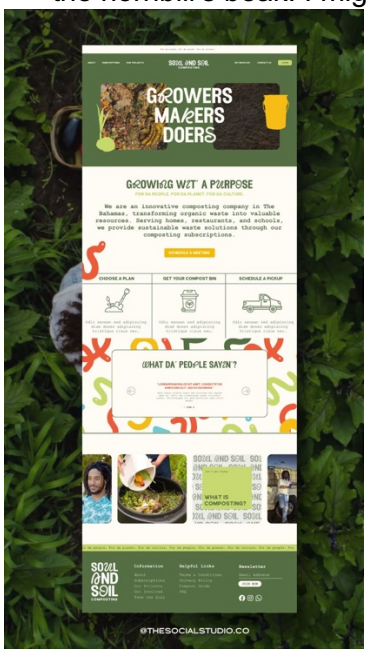

- https://en.wikipedia.org/wiki/Rhinoceros_hornbill
- there are many images on the wiki, but I plan on finding more specific images
    - especially for close-ups for physical description

Audience

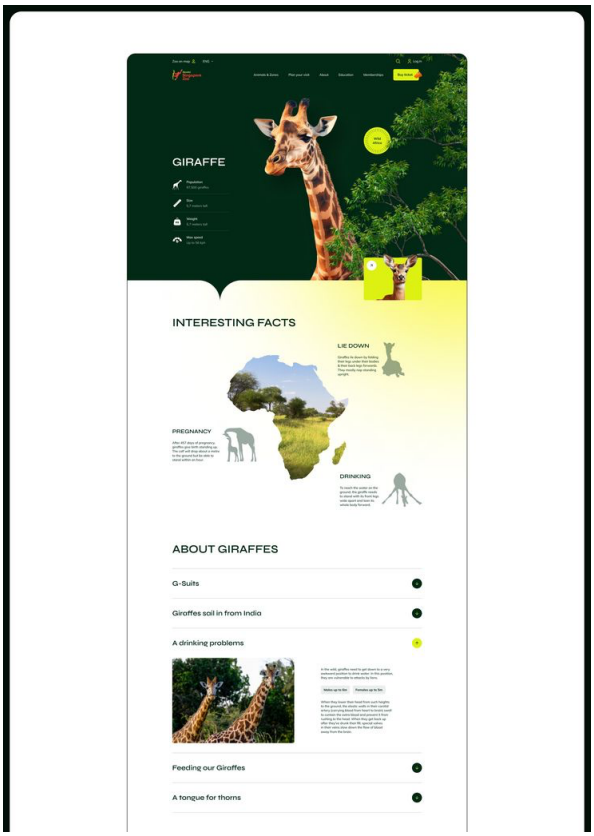

- focus on making a website that was aesthetically be appealing to a younger audience so that they can learning about a really cool bird ☺

Visual Style

- I would want it to be bright and colorful. Maybe utilize orange and yellow that is seen on the hornbill's beak. I might include bold shapes that resemble the silhouette of the bird.

- I think something like this in terms of the playfulness of the website.

- I like the way that this example arranges the information; divides texts so that it's easier to digest

- Maybe info could be arranged to be more grid-like, with the images being the main focus and text as more secondary (especially since I don't have that much text).
